LUKE THOMPSON

AI AGENT BUILDER · AUTOMATION & TOOLING DEVELOPER

Hamilton, ON · 905-806-9257 · stevenlukethompson@gmail.com
Portfolio: xylardark.github.io/Portfolio-Studio/u/admin/sirion · GitHub: github.com/XylarDark

PROFESSIONAL SUMMARY

Developer who builds with AI agents and checks their work. Since February 2026 I've run HomeWorld, my solo Unreal Engine 5.8 / C++ project, with AI coding agents writing much of the code under my direction, and I built the tooling that tests their output against real state before anything counts as done. Earlier: game UI/UX and C# REST integrations at OutFusion (2022), C++ ECU firmware and JS/SQL web at TruckSail (2020–21), and client software and QA at Evenica (2018–19).

CORE SKILLS

Agents & automation	Directing AI coding agents, multi-agent workflows with handoff rules and review gates, task and prompt design, JSON request/response tool bridges (MCP), verification gates
Languages	Python, TypeScript/JavaScript, C++, C#, SQL, PowerShell
APIs & data	REST APIs, JSON schemas, SQL Server, MySQL, Supabase (Postgres)
Workflow	Git/GitHub, pull-request review, GitHub Actions, pytest, Vitest

SELECTED PROJECTS

HomeWorld — AI-agent workflow and verification tooling Feb 2026 – present

Independent (solo) · Unreal Engine 5.8, C++, Python · private repository, available on request

- Run a multi-agent development workflow: separate agent roles for research, design interviews, implementation and testing, with written handoff rules and merge gates. Docs-only changes merge after a passing test; source and level changes wait for my approval.
- Built an editor automation bridge: agents and scripts send a JSON `{command, args}` request and get structured JSON back (world info, asset checks, a per-row pass/fail probe); new command modules plug in.
- Built checks that refuse a false "done": a headless test runner that hard-fails on five causes of fake passes (unreadable report, wrong engine, zero tests run, stale report, stale binaries), and a build wrapper with one machine-wide queue so parallel agents can't collide.
- Keep a tool-capability matrix in which every claim carries an evidence level, from E0 (only claimed in a doc) to E5 (survived a fresh editor). Backed by 42 C++ automation test files and 150+ Python test files.

Portfolio Studio — media-résumé site Sep 2026 – present

Independent · React, TypeScript, Vite, Supabase · xylardark.github.io/Portfolio-Studio

- Public portfolio product with Studio editing, a Supabase backend and per-employer pages, built with AI coding agents through pull requests I review; GitHub Actions deploys each merge to GitHub Pages.

Shift — playable shop & delivery game Aug – Sep 2026

Independent · Phaser 3, TypeScript, Vite · Live: xylardark.github.io/ShiftGame

- Shipped a browser/PWA game with a fixed 60 Hz simulation and cached A* routing; 83 Vitest test files in the public repo.

EXPERIENCE

Game Developer · OutFusion · Hamilton, ON Feb 2022 – Dec 2022

- Implemented game UI/UX from the design docs; built and tested C# REST API integrations for player data; integrated and tested game UI art across mobile and desktop; partnered on bug verification and release quality.

Software Developer · TruckSail · Ancaster, ON Feb 2020 – Jan 2021

- Wrote C++ firmware for truck ECU devices (STM32, CAN bus) with defect finding; built JS/Bootstrap UIs, optimized SQL and maintained GitHub workflows.

Software Developer & QA Tester · Evenica · Burlington, ON 2018 – Sep 2019

- Built and tested client software (Andrew Peller, Young's Market Company, MM Realty International): T-SQL, C#, Linux, and Laravel (MySQL, PHP, JavaScript/jQuery, Vue.js).

Delivery Driver (Uber, retail delivery) · Hamilton, ON 2022 – 2026

EDUCATION

Diploma, Computer Systems Technology — Software Development · Mohawk College · Hamilton, ON · 2019

Valid Ontario Class G licence · Open to hybrid in Toronto (commuting from Hamilton)
